

## **Data and Stata Do File Documentation for:**

### **“Marriage Networks, Nepotism and Labor Market Outcomes in China”**

#### **A. Data Sets**

The analyses in the paper make use of two publicly available data sets on households in China.

##### **Dataset 1: China Health and Nutrition Survey**

The data file used in the analysis is chns.dta.

The China Health and Nutrition Survey data are free and publicly available but you must register to obtain access to the raw data. Please find information about accessing the data as well as additional information, including survey design and questionnaires at:

<http://www.cpc.unc.edu/projects/china/>

##### **Dataset 2: State and Life Chances**

The State and Life Changes in Urban China data are free and available to users at ICPSR member institutions. Please find information about accessing the data as well as additional information, including survey design and questionnaires at:

<http://www.icpsr.umich.edu/icpsrweb/ICPSR/studies/03552>

#### **B. Analysis Files (Stata Do Files):**

##### **Dataset 1: CHNS**

The files to replicate the results using the CHNS data are:

chns\_summary.do: The summary statistics tables.

chns\_regressions\_male.do: The regression results with the male sample.

chns\_regressions\_fem.do: The regression results with the female sample.

chns\_regressions\_hh.do: The regression results with the household-level sample.

##### **Dataset 2: SLCC**

The files to replicate the results using the SLCC data are:

slcc\_summary.do: The summary statistics tables.

slcc\_regressions\_male.do: The regression results with the male sample.

slcc\_regressions\_fem.do: The regression results with the female sample.
